DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, drawn to an apparatus, classified in class 156, subclass 345.
 - II. Claims 6-10, drawn to a computer-readable medium, classified in class 700, subclass 266.
 - III. Claims 11-15, drawn to a method, classified in class 134, subclass 22.18.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group III and Groups I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus of Group I can be used to practice another and materially different process, for example, to clean or etch wafers.

The method of Group III can be practiced without a computer-readable medium, instruction means and a processor recited by the claims of Group II.

3. Inventions of Group I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different modes of operation, different functions. The invention

Art Unit: 1746

of Group II requires a computer-readable medium, which comprises means to control a processor that controls a wafer processing system. This is not required by the invention of Group I. The invention of Group I comprises neither the medium, nor the processor. The invention of Group II requires a controller coupled to an agent source, a gate valve and a turbomolecular pump. Such controller is not required by the invention of Group II.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for one of Groups I, II and III is not required for any other Group, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
